Caractéristiques du jeu de données ACSIncome

Le jeu de données est décrit dans l'article Ding, Frances, et al. "Retiring adult: New datasets for fair machine learning." *Advances in neural information processing systems* 34 (2021): 6478-6490. Cet article est accessible avec le lien https://arxiv.org/pdf/2108.04884.pdf.

Le jeu de données ACISIncome est détaillé dans l'Annexe B1 extraite ci-dessous. Les valeurs des features et du labels sont fournies dans deux fichiers séparés.

Predict whether US working adults' yearly income is above \$50,000.

Target: PINCP (Total person's income): an individual's label is 1 if PINCP > 50000, otherwise 0.
Note that with our software package, this chosen income threshold can be toggled easily to label the ACS PUMS data differently, and construct a new prediction task.
